# Pure wellness for the whole body

## Rez warm-air showers

After physical work or sports activities, we like to get under the shower and enjoy fresh, tingling water on our skin. But that's only the first part of the feel-good phase, because the relaxing wellness programme includes a pleasant, warm breeze that dries your hands, hair and body. The Beluga warm-air shower fulfils the wish for physical relaxation with high-end equipment. What's more, it offers planners and architects a wealth of opportunities to design wet zones that are both attractive and practical.

Many years of development work, close collaboration with customers and users, and systematic implementation of user needs have shaped our product range.

Now with the latest generation of Beluga warm-air showers. State-of-the-art technology with especially attractive height adjustment, now available with flush installation.

Today, Rez manufactures the most innovative warm-air showers and hair dryers in the world. Without question, thanks to the sophisticated technology and wide range, Rez products are pure wellness for hands, body and hair.

Rez Beluga warm-air showers — established for use in public facilities and domestic spaces

Swimming facilities, gyms and sports facilities, fitness centres, schools, hotels, restaurants, and care centres are just a few examples. Beluga warm-air showers feature optical accents that blend harmoniously with the surrounding architecture or make a statement with contrasts.

The newly developed Beluga portfolio ranges from fixed units to height-adjustable units with crystal mirrors. A special design highlight: the height adjustment feature can now also be installed flush to the wall.

# World innovation with the latest innovative technology

## Rez warm-air showers

### Beluga

The all-new Beluga warm-air showers have a lot of impressive new features: the new high-performance induction motor, the gas-pressure spring system for height adjustment and optimum maintenance-friendliness.

And a particularly attractive feature: the Beluga's height adjustment system can now also be mounted flush to the wall, saving space. The high-performance ventilator enables reliable long-term operation, and the high-frequency radar technology with precisely set coverage allows problem-free positioning.

The warm-air showers are available in selected colour combinations (or in your individual colour scheme), with or without height adjustment and of course flush- or surface-mounted. Practical: the height-adjustable versions are also available with built-in crystal mirror.

And by the way: the Beluga warm-air shower is the only truly vandalism-resistant device in its class.

minutes. While the radar continues to detect movement, the device keeps running its 2.5-minute cycles. This prevents the nuisance of switching on and off during the process. A positive factor for children: they just have to pull the device to the height they want. No buttons to press — stand under it, dry your hair, and that's that.

#### Beluga warm-air showers for the public domain

Public operators also benefit from considerable advantages. The device has no openings for sensors or switches, which prevents damage and reduces maintenance. And this will please your maintenance budget: all technical repairs take less than five minutes. You just replace the part yourself.

#### The advantages of Beluga warm-air showers:

- suitable for demanding, continuous operation on a daily basis
- vandalism-resistant
- compliant with the highest safety requirements
- economical energy consumption
- completely new Swiss design
- even quieter operation
- space-saving with flush installation option
- 20 to 30 years of use
- 20-year parts warranty

#### Hands-free, high-frequency radar with timer

The world exclusive developed by Rez revolutionises the use of warm-air showers. A great benefit for users is the high-end automatic timer. When the radar detects movement within its precisely set coverage area (10 – 15 cm), the device turns on and runs for 2.5

## Beluga: inspiring technology

The Beluga warm-air shower, an all-new development, has many clever details designed to impress.

**NEW! Flush-mounted model now also height adjustable**  
The depth of installation can be individually adjusted with our proprietary depth adjustment for different finishes (tiles, wood, concrete, etc.)

**Gas-pressure spring system**  
With the high-performance spring system, it is impossible to force the hair dryer up and down. This guarantees durability.

**Height adjustment with precision rail guides**  
The powder-coated full-metal height adjustment system has a range of 530 mm. The precision rail guides are designed to bear a load of 140 kg; it is therefore almost impossible to vandalise the height adjustment system.

**Power connection**  
There is a cavity running along the back of the height adjustment system through which the power connection can be laid along the entire length of the height adjustment system. The power cable is concealed on the back and is not visible. Likewise, the internal spiral cable is sealed, increasing the safety of all users.

**Crystal mirror**  
A high-quality, vandalism-resistant crystal mirror is installed as standard in the Beluga V/S and UPV/S. The Beluga V surface-mounted model has no mirror.

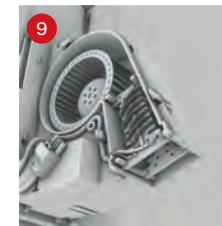

**Robust plastic hood**  
The Beluga's air inlet is at the back, making the plastic hood very robust. A practical innovation: The hood just folds down for repairs and maintenance. The hair dryer stays at the desired height.

**High-performance induction motor**  
The motor unit is sealed so that no dust or moisture can penetrate the electronics and bearings. For long-term, trouble-free operation, dust and dirt have to be removed from the fan regularly. This is an easy process thanks to the modular system.

**High-frequency radar with timer and distance setting**  
World exclusive in the Beluga warm-air showers. The customer can individually set the time (30 sec. – 5 min., factory setting 2.5 min.) and the distance (10 – 15 cm) to suit his or her own needs.

**Ceramic heater**  
The ceramic heater is non-flammable. The 0.7 mm heating filament is indestructible. The heater is fitted with double overheating protection, ensuring a high level of safety. However, if overheating does occur, the unit will switch off automatically and start again after cooling with no damage to the unit. Important: Dust must be removed from the unit every 3 months. The heater is easy to clean thanks to its ease of access, ensuring a long lifespan.

**Maintenance made even easier**  
Because of its simple design (modular principle), the Beluga is easy to disassemble. This ensures easy maintenance by the customer. Maintenance costs are reduced. Any repair takes five minutes at most. Thorough cleaning is completed in less than ten minutes.

# Appliance dimensions, FAQs and tips

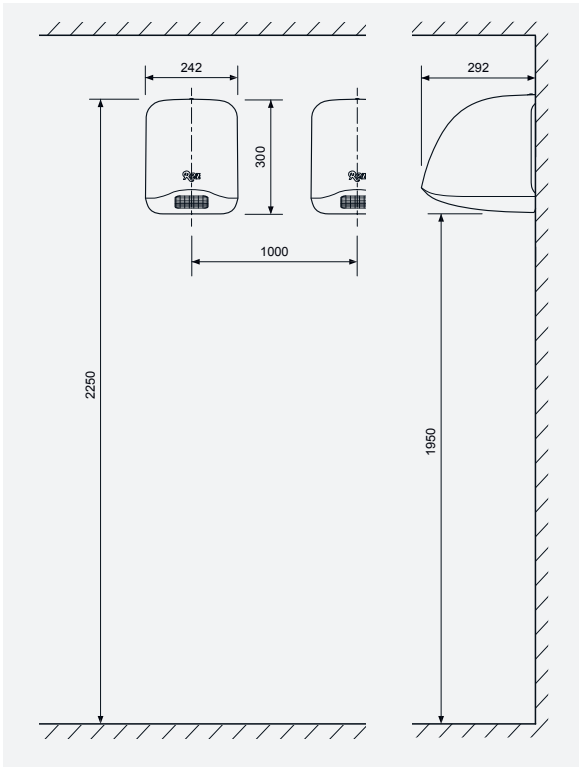

## Beluga

**Beluga UPV/S warm-air shower**  
Flush-mounted, with mirror  
Height adjustable

**Beluga V/S and V warm-air showers**  
Surface-mounted, with or without mirror  
Height adjustable

**Beluga Fix warm-air shower**  
Fixed unit, not suitable for public facilities

## Beluga FAQs

**How many warm-air showers do I have to plan for?** The optimum number is three shower heads to one warm-air shower.

**What distance should I allow between the units?** The recommended distance is 100 cm from the centre of one mirror to the centre of the next.

**What is the optimum height at which to install the Beluga?** Our recommendation: 190 – 195 cm bottom edge hood

**How often does the Beluga have to be cleaned?** Three to four times per year, possibly more depending on the number of units. For further information, see the service video.

More FAQs at  
[www.rez-ag.ch/en/beluga-faq](http://www.rez-ag.ch/en/beluga-faq)

## Energy used to best effect

The Beluga produces a fairly large volume of air and therefore needs significantly less drying time. Small hand hair dryers produce a small volume of air and therefore take longer to dry hair.

The warm Beluga air heats the room at the same time and is not dispersed. So heating costs in the cloakrooms can often be reduced.

In addition, the warm air emitted reduces humidity.

For an interesting energy calculation, see [www.rez-ag.ch/en/beluga-energy](http://www.rez-ag.ch/en/beluga-energy)

## Rez planning tips

Make your work easier by planning your electrical connections in good time.

Ask us in advance for individual advice on the positioning and choice of the different types of appliance.

# Rez

## Over 95 years of success in washroom facilities

Everyone is familiar with Rez AG's warm-air showers, which are used in 90% of all public cloakrooms in Switzerland. Its extensive experience in the area of thermo-technical equipment has made Rez AG the absolute number one in public institutions and schools.

The company was founded as long ago as 1927. It soon earned a reputation for high-quality equipment and installations. Throughout all these years, an enormous amount of emphasis has been placed on the development, production and sale of further products. Thanks to outstanding product quality, customised product solutions and efficient service, Rez AG has also achieved an outstanding name in other countries. Contemporary design, environmentally friendly, energy-saving and hygienically flawless equipment all contribute to Rez AG's reputation.

### Rez's promise of sustainability

Our goal is to manufacture high-quality, energy-efficient products which will provide service for many years. This is the key to Rez's success.

For example: we guarantee a minimum of 20 years' service life for the Beluga range, with low maintenance cost and economical energy consumption. And we guarantee 20 years' availability of spare parts. In addition, Beluga products are made from 90% recyclable materials. These measures reduce electrical waste and save resources.

### Developed and designed in Switzerland

The Beluga range is developed and designed in Switzerland. The components are manufactured by carefully selected companies worldwide and assembled in Switzerland.
